How To Unhide All Rows In Excel – Simple & Easy Steps

JUNE 17, 2024 | ANGELINA ROBINSON

Excel is a powerful tool for managing data, but sometimes you need to hide or unhide rows to keep your information organized.

This guide explains what unhiding rows means in Excel and why it's essential to know how to do it.

What Is Unhide in Excel?

:≡ ≑

Table of Contents

In Excel, the "unhide" function makes hidden cells, columns, and rows visible again. This function undoes the "hide" action, which conceals parts of the worksheet without deleting them.

People use the hide function to protect sensitive data or to focus on specific parts of the worksheet. You can hide entire columns or rows, but not individual cells.

Why Learning Excel Is Important

Knowing how to use Excel is crucial in today's business world. It's an excellent tool for sorting and analyzing large amounts of data.

However, when working with hundreds or thousands of rows and columns, the worksheet can become overwhelming. Hiding certain parts can simplify the view and make the data easier to work with.

The Benefits of Unhiding Rows in Excel

For beginners, learning to unhide rows is very useful for organizing data and managing spreadsheets.

- **Control Visibility**: Unhiding rows lets you control what you see in your worksheet, making it easier to find and analyze information.
- **Quick Access**: It allows you to quickly view all the information in hidden rows, saving time compared to unhiding each row individually.

By mastering the unhide function, you can manage your Excel worksheets more effectively and efficiently.

How to Unhide All Rows in Excel With a Shortcut

To reveal all hidden rows in Excel using a shortcut:

1. Open your Excel spreadsheet.

	A	В	D	E
1	No	Name	Result	
2	1	Mahesh	Pass	
5	4	Harry	Pass	sai
6	5	Dave	Pass	O
7	6	Patrick	Pass	X
8	7	Jay	Fail	LÛ
9	8	Josh	Fail	×
10	9	Dan	Pass	0
11	10	Ben	Pass	
12				

3. Select the entire worksheet by pressing **Ctrl+A** (Windows) or **Command+A** (Mac). Alternatively, you can click the "**Select All**" button located in the top-left corner of the worksheet.

4. With the worksheet selected, use the shortcut **Ctrl+Shift+9**. This command will unhide all hidden rows instantly.

5. Alternatively, you can right-click on any selected cell within the worksheet and choose "**Unhide**" from the context menu to achieve the same result.

Following these steps will allow you to quickly unhide all rows in Excel using either a keyboard shortcut or the right-click menu.

How to Fix Unhide Rows in Excel Not Working

Here are steps to fix issues with unhide rows in Excel when it's not working:

If the Freeze Panes Option is Active:

1. Navigate to the View tab.

3. Your rows should now be visible, and **hiding/unhiding** should work How To Unhide All Rows In Excel - Simple & Easy Steps properly from now on.

When the Row Height is Very Small or Zero:

- 1. Right-click on the row number where rows are hidden.
- 2. Choose "**Row Height**" from the menu.
- 3. Increase the row height as needed to reveal the hidden rows.

If Filter Mode is Active:

- 1. Go to the **Data tab**.
- 2. Under the Sort & Filter ribbon, select "Clear" in the "Filter" group.
- 3. This action will remove any hidden rows caused by **active filters**, making all rows visible again.

Wrap Up

Knowing how to unhide rows in Excel is a valuable skill for anyone working with spreadsheets.

Whether you need to unhide all rows at once, reveal specific rows, or troubleshoot when the unhide function isn't working, these techniques will help you manage your data more effectively.

With practice, you'll be able to control the visibility of your data and work more efficiently in Excel.

FAQs

How do I check for frozen panes in Excel?

2. Select **Freeze Panes** to lock specific rows and columns in place.

3. Alternatively, choose **Split Panes** to create two separate windows of the same worksheet.

How to unhide all rows in Excel on a Mac?

Unhiding rows on a Mac is the same as on Windows:

- 1. Select the hidden rows by dragging your cursor over them.
- 2. Right-click and select **Unhide**.

What does it mean if the Unhide option is gray?

If the Unhide option in your Format list is gray, it means it's not available. Here are two possible reasons:

1. Protected Worksheet: You might be working on a protected worksheet. To unprotect it, go to the Review tab, click on Changes, and select Unprotect Sheet. This should make the Unhide button clickable.

2. No Hidden Items: If the worksheet is already unprotected, a gray Unhide button might mean there are no hidden items to unhide.

Do I need to adjust the height of rows after unhiding?

No, you don't need to adjust the row height after unhiding, as long as the row height properties haven't been changed.
